p-PSDB; w09025.

Nucleic acids encoding nicotinic acetylcholine receptor sub-units used in screening to determine the effect of drugs on the receptor placed in screening to determine the effect of drugs on the receptor placed in screening to determine the effect of drugs on the receptor placed in the interpretation of the alpha-7 subunit (w09025) of the human neuronal nicotinic acetylcholine receptor (nAcha). Host cells, esp. mammalian cells or amphibian occytes, carrying alpha-7 nucleic acids, opt. in combination with other alpha and/or beta subunit nucleic acids (see also T48232-38, T48240-41), express recombinant nAcha subunits useful for identifying cpds. that modulate the activity of human nAchas.

Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with a variety of potential agonists or antagonists provides information with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting drugs should exhibit fewer unwanted side effects than drugs identified e.g. screening with cells that express a variety of subtypes.

CC directed against at least 2 mRNAs selected from target genes, coding and conon-coding regions of RNAs corresponding to target genes, gene coding target genes, gene coding target genes, gene coding target genes, gene coding the 3'-end and the juxta-section between coding and non-coding regions and all segments of RNAs encoding proteins associated with one common describes associated with one common describes genes as sociated with one common describes genes as sociated with one coding proteins associated with one compared the section of the antisense oligonucleotides (specifically x55180-271) can be used for the antisense coding uncleotides (specifically x55180-271) can be used for the antisense coding conditions. Typical diseases and conditions conditions are those associated with impaired respiration and inflammation, concluding lung diseases, pulmonary vasoconstriction, inflammation, allergic rininits, acute asthma, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary distress syndrome, pain, cystic fibrosis, pulmonary cancer, pulmonary vasoconstriction, emphysema, chronic obstructive commonary distress syndrome, pain, cystic fibrosis, pulmonary carcer, hepatocellular carcinoma, kidney cancer, pancreatic cancer, hepatocellular carcinoma, kidney cancer, pencreatic concers as well as all types of cancers which may metastasize or have metastasized to the lungs, including breast and prostate cancer.

CC The specification describes antisense oligonucleotides (X52869-X55271)

CC directed against at least 2 mRNAs selected from target genes, coding and

CC initiation codons, genomic flanking regions, intron-exon borders, the

CC initiation codons, genomic flanking regions, intron-exon borders, the

CC frend, the 3'-end and the juxta-section between coding and non-coding

CC regions and all segments of RNAs encoding proteins associated with one

CC or more diseases, conditions or mixtures. The antisense oligonucleotides

CC may be derived from sequences X5572-74. These multiple target

CC oligonucleotides (specifically X55180-271) can be used for the antisense

CC are those associated with impaired respiration and inflammation,

CC allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,

CC allergic rhinitis, acute asthma, allergies, asthma, impeded respiration,

CC respiratory distress syndrome, pain, cystic fibrosis, pulmonary

CC unmonary disease (CODD), and cancers such as leukemias, lymphomas,

CC cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic

CC cancer, hepatocellular carcinoma, kidney cancer, melanoma, hepatic

CC metastases, as well as all types of cancers which may metastasize or have

CC metastases and the lungs, including breast and prostate cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
       New isolated nucleic acid encoding the new human cytokine Tango-77 used to inhibit inflammation and to screen for specific modulators

1. Used to inhibit inflammation and to screen for specific modulators

2. Example 5; Figure 3; 226pp; English.

2. X02956-X03048 and X22310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2310-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X2301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22301-X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22304 are overlapping BAC genomic sequences

3. X02956-X03048 and X22304 are overlapping BAC genomic se
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ï

New recombinant Herpes Simplex Virus vaccines - rendered

Tavinlent by deletion of ICP 34.5 gene encoding active gene prod.

Bicclosure; Fig 1: 78pp; English.

Disclosure; Fig 1: 78pp; English.

Disclosure; Fig 1: 78pp; English.

Cof infected virus-1 (MGH-10) was isolated from a recurrent facial vesicle and passaged a maximum of four times in cells in culture.

Viral DNA was prepd. from virons that accumulated in the cytoplasm.

Cof infected vERO cells (Kieff et al., J. Virol., 8, 125-132 (1971)).

The BamHI SP junction fragments contg. the domain of the gene that specified ICP34.5 were cloned into a pUCIB plasmid using HSV-1(F) sequences as probes in colony blot hybridisation. Further subclonings were done to facilitate sequencing of different regions of the gene. HSV may be rendered avirulent by removing the ICP34.5 gene from the viral genome. The modified HSV genome is useful for eliher does not establish latent infections or which cannot be reactivated from a latent state.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          V18130 standard; DNA; 11820 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 translocation partner to this gene on chromosome 6 is the hydronephrosis gene (HNG) product. The HNG gene can be used as a starting point to design suitable compounds or techniques for the treatment of renal diseases or disorders, or nucleotide probes for diagnosing cells involved in renal diseases or disorders. A protein or a fragment encoded by HNG gene can be used as a starting point for preparing suitable antibodies for diagnosing cells involved in renal diseases and disorders. The products and method can be used to treat or diagnose renal diseases and disorders selected from vesical-ureteral reflux, uni or bilateral pelvi-ureteral junction obstruction, multicystic renal dysplasia, hydronephrosis, von Mayer-Rokitansky-Kuester disorder and bifid ureter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hydronephrosis gene - useful to treat or diagnose renal diseases and disorders, e.g. vesical-ureteral reflux, pelvi-ureteral junction obstruction, multicystic renal dysplasia or renal agenesis Disclosure; Fig 6A-B; 73pp; English.

This DNA encodes a USF2 gene derived from human chromosome 19. A translocation partner to this gene on chromosome 6 is the hydronephrosis
                                                                                                 cata_signal

An HSV-specific junction-spanning transcript (L/ST) maps at the 5 and to the b repeat sequences of HSV DNA at approx. 3 and 125 kb, and extends into the c repeat sequences of HSV DNA. Compounds that inhibit HSV L/ST synthesis may be used as anti-HSV virucides. The HSV-1 DNA sequence in the region of the L/STs is given in 076213.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO9428156-A.

                                  Use of herpes simplex virus U(s)3 polypeptide - for developing products for modulating apoptosis in cells and for identifying compounds which act as stimulators or inhibitors of apoptosis Example 2; Pages 60-63; 85pp; English.

This is the nucleotide sequence of Herpes simplex virus ICD4 used the method of the invention as modulators of apoptosis. The method and products can be used to identify compounds which modulate (stimulate or inhibit) apoptosis in cells. They can be used to immortalise cells for the study of these cells or for growing cell
in large numbers for the productions used for stimulating apoptosis in cel with a MSV infection.
                                                                                                                                                                                                                                                                                                                                              The nucleotide sequence of the Herpes simplex virus ICP4 Herpes simplex virus ICP4; HSV ICP4; modulator; apoptosistimulation; inhibition; HSV infection; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                              20/c

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            2691
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The herpes simplex virus (HSV) alpha-4 gene encodes infected cell protein number 4 (ICP4). Both the alpha-4 gene and ICP4 can be used to block cell apoptosis. Similarly the administration of an agent that inhibits ICP4 or the alpha-4 gene can induce apoptosis in HSV infected cells. This can be used for the immortalisation of cells, production of proteins, gene therapy, or inhibition of cell death induced in vivo. They can also be used for production of therapeutics comprising inhibitors of HSV ICP4 function, useful for treating HSV function. Sequence 4257 BP; 412 A; 1768 C; 1663 G; 414 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2751

                                                                                                                                                                                               Serine/threonine protein kinase inducing axon extension and DNA encoding it - and antisense DNA inhibiting axon extension and useful for treatment of nervous system disorders.

Claim 1; Page 43-52; 84pp; Japanese.
Claim 1; Page 43-52; 84pp; Japanese.
The present sequence encodes a serine/threonine protein kinase (STPK) protein. STPK induce axon extension. The STPK protein and nucleic acid protein. STPK induce axon extension. The STPK protein and nucleic acid may be used for screening candidate drugs for treatment of neurological disorders such as Alzheimer's disease, senile dementia, and disorders such as Alzheimer's disease, senile dementia, and sisorders such as Alzheimer's disease, senile dementia, and the antisense DNA may be used for diagnosis of neurological disorders. The antisense DNA may be used in the treatment of neurological disorders.

/note="Organ: eye; Vector: lambda gt10; Site_1: EcoRI;
Site_2: EcoRI; The library used for sequencing was a
sublibrary derived from a human retina cDNA library.
Inserts from retina cDNA library DNA were isolated,
randomly primed, PCR amplified, size-selected, and cloned
into lambda gt10. Individual plaques were arrayed and
used as templates for PCR amplification, and these PCR
products were used for sequencing."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             September 17, 1999, 22:02:31; Search time 1962.17 Seconds
